

MODEL PERFORMANCE METRICS

1. **Define Your Message**: Decide what you want to convey in the video. Are you highlighting the accuracy, precision, recall, F1 score, or any other specific metric?
2. **Gather Data**: Collect the performance metrics data for your model. Make sure to have clear numbers and results.
3. **Create a Storyboard**: Plan the structure of your video, including the intro, content sections, and conclusion.
4. **Design in Canva**: Canva can be used to design the visual elements of your video, such as text, graphics, and charts. You can use Canva to create visually appealing slides or scenes.
5. **Choose a Video Editor**: Use a video editing tool (not Canva itself, as it primarily handles graphics) to combine your visuals from Canva with other elements, such as voiceover or music.
6. **Narration**: Consider adding a voiceover to explain the metrics and their importance.
7. **Animate Charts**: If you have data visualizations, you can animate them to make the video more engaging.
8. **Add Transitions**: Smooth transitions between scenes or slides can make the video look more professional.
9. **Review and Edit**: Carefully review the video for any errors or improvements.
10. **Export and Share**: Once you're satisfied, export the video and share it on platforms or with your target audience.
